## Cover Letter — Technical Account Manager, Neural Concept

---

Dear Neural Concept Team,

I'm applying for the Technical Account Manager role because it sits at the intersection I've spent my career building: customer-facing technical delivery and AI-driven engineering products.

As founder of NexAI, I've led enterprise AI delivery across consulting, solution architecture, and product engineering — including building and operating a multi-agent AI orchestration system (on the Multica platform) that coordinates dozens of AI agents on real production work, and architecting AIDO, an on-device AI assistant product for elderly and family safety monitoring with Korean natural language processing.

I understand this role centers on physics- and simulation-informed ML products, a domain where my direct CAD/CAE tooling experience is limited — I want to be upfront about that rather than overstate it. What I bring instead is a demonstrated ability to learn fast in technically demanding, ambiguous domains, translate complex AI systems into terms customers can act on, and own outcomes end-to-end from architecture through delivery and operations.

I'd welcome the chance to discuss how that background could translate into helping Neural Concept's customers succeed with your platform.

Best regards, Kyounuk (Karl) Kim
